I. READING COMPREHENSION

1. A six-year-old girl suffering from a genetic degenerative eye disease has compiled a list of things she wants to see before she goes blind. Molly was born with normal eyesight, but was diagnosed with retinitis pigmentosa a year ago. The condition, for which there is no cure, causes progressive vision loss. Her parents Eve and Chris first noticed Molly was having trouble with her sight when she began struggling to read her homework or watch television. "I never thought Molly could have inherited the disease because we were always told that only boys could get it," Eve said. "When we got the diagnosis, it was a big shock. We don't know exactly when Molly will go blind. Now she can hardly see in low lights and falls over quite a lot."
2. The couple's two other children do not suffer from the disease but, because it is hereditary, they are tested every three to six months for signs of degenerating vision. "There is still a chance that I could have three blind children and that terrifies me," said Eve. "Our family is working together to help her take in as much as possible before her eyes get too poorly. We just want to help her create as many magical memories as we possibly can," Eve added. "Molly wants to go to London, Australia and Egypt. I know I won't be able to give her half of that but I can try."
3. The family has set up a fundraising page called *Making Molly's Memories*, which has so far raised over £34,000. In a post published on the page, Eve wrote: "Words cannot describe how amazed and grateful we are by all the wonderful donations and offers of help. What started off as some small local fundraising to help our baby girl has become news across the globe. Every penny helps to get our little girl closer to seeing her dreams."

III. LANGUAGE: (6 marks)

1. Fill in the blanks with six (6) words from the box. (3 marks)

access – claimed – devices – increasingly – forbidden – lack – hidden – boost

Teachers are warning that growing numbers of pupils turn up for lessons exhausted and irritable because they spend hours on tablets at home - often late into the night.

They say pupils are..... showing symptoms of 'tablet addiction' - a loss of interest in other activities, and a of control over their actions.

The concerns were raised by Dr Mary Bousted who urged parents to consider removing those at bedtime. She said tablets were worse than televisions in bedrooms because they were smaller and more easily

The warning follows a research which found children's to tablets at home has more than doubled from 20 per cent to 51 per cent in 2012. It has also been that the boom in tablet ownership has led to children as young as four being treated for 'iPad addiction'.

2. Circle the right option (3 marks)

A research into equal parenting reveals that the satisfying picture of men routinely sharing childcare is simply a myth. Men haven't taken on childcare in **(nothing – anything – something)** like the numbers we've been led to believe. Figures from the National Office for Statistics reveal that at the end of 2012, there were just over 6,000 more full-time, stay-at-home dads looking **(after – at – for)** babies and toddlers than there were ten years ago. Yet, in the same period, around 44,000 women have stopped **(to be – been – being)** stay-at-home mothers.

The massive **(size – place – gap)** has been filled by childcare and grandparents, not fathers. Statistics reveal that our children's grandmothers are twice as likely to take care of them **(while – during – on)** the day as their own dads. The truth is that men don't really want to do childcare and are successfully using **(professional – equal – convenient)** excuses to avoid it.
